

PORTAFAB/WAITES COMPANY PROFILE

For over 30 years Porta-Fab has been the leading manufacturer of modular Cleanroom wall systems. Our systems interface with floors, ceilings, and mechanical components to provide an ultra clean environment with effective control of air flow, pressure, temperature, humidity and filtration. They can be customized to fit your exact requirements and provide a cost-effective alternative to conventional construction without compromising quality, durability, or efficiency.

Waites Company and PortaFab have had a strategic partnership in place for over twenty years that has been specifically focused on microelectronic and biopharma cleanroom and controlled environment markets. The Waites Company's mechanical design and project management experience, paired with PortaFabs architectural and structural capabilities, generates the unique ability to offer the client one source of responsibility for the build-out and performance requirements of their project. Turnkey solutions from design through validation.

While flexibility remains a key advantage for the use of modular architectural systems, there are many other reasons to consider modular over conventional construction. From ease of design, coordination and installation, to the adaptability and durability that is offered, PortaFab offers excellent benefits. With the need for adaptability in today's manufacturing, facilities are being constructed of components that not only allow for change, but provide the utmost flexibility as the marketplace changes. Modular design accommodates this need for flexibility. Non-progressive construction with demountable walls allow the removal of individual wall panels without disturbing adjacent panels, flooring or ceiling. Modular systems can also be disassembled and relocated to quickly create or expand Cleanrooms, lowering the costs of expanding existing facilities. The system can be moved, reconfigured cleanly and easily. All of the components can be reused in new configurations, and raceways built into the system allow easy access to utilities.

Along with all of these things, the reduced construction time, minimized disruption, financial savings, consistent quality and regulatory compliance, and tax benefits are also advantages of Porta-Fab's modular clean rooms.
